Canopy Bracket

Fixed Length Vertical Bracket: Model SAW5662

Fixed Length, Dog Legged Bracket: Model SAW5892

There are many intricate variations for this type of bracket, due to this each installation requires a full survey. In an effort to reduce costs, generic versions have been designed as listed below. To note, variable length brackets can be requested if required.

Fixed Length Vertical Bracket – Model SAW5662

The camera fixing plate is the only constant, all other details are variable. To be able to supply this item we would need to know the following information:

- Length of arm;
- Type and size of beam or joist the bracket is to be fitted too;
this information will also dictate whether or not an off set bracket would be more appropriate.

From this information we should be able to determine the orientation of the connection plate, size of this plate and the lengths of studding required to attach the bracket to the beam.

Fixed length, Dog Legged Bracket – Model SAW5892

The type is similar to the above, but includes a horizontal arm to achieve an off set for the camera housing.

Again to manufacture this item we would need to know all the above information plus the length of off set.

Finish

All units are painted to individual TOC requirements, Cleaned and de-greased

1 coat Interpon APP120 cured 10min @ 160° C or 5 min @ 200° C

1 coat powder coat. (Colour to be specified) 60% Gloss, cured to manufactured spec. Film thickness

Key Features:

Fixed or variable length

Cable management

Rust resistant coating
